

Downloading FLASH Video Files from YouTube (or other video sharing sites)

INTERNET EXPLORER

1. Go to the page where the video is playing and copy the URL
- right-click on the URL
- then click copy
2. Go to www.keepvid.com
3. Paste the URL in the blue box
4. Click the download button
5. After the site reloads, right-click the green Download link for the flv option, select "save target as" and save the file to your desktop

You can now drag the file onto a page in SMART Notebook

The screenshot shows the KeepVid website. Step 1 points to the URL bar in Internet Explorer containing a YouTube video URL. Step 2 points to the KeepVid logo. Step 3 points to the URL input field where the copied URL is pasted. Step 4 points to the 'DOWNLOAD' button. Step 5 points to the 'Download' link for the 'get_video.flv - Low Quality' option in the download links section.

FIREFOX

1. Go to <https://addons.mozilla.org/en-US/firefox/addon/3006>
2. Click the green "Add to Firefox" button to install
3. Go to the page where the video is playing. Next to the URL you will see the downloader helper icon with small arrow.
4. Click the small arrow and select the FLV option to download and save the FLV file to your desktop

You can now drag the file onto a page in SMART Notebook

The screenshot shows the Firefox Add-ons page for the 'Download Helper' add-on. Step 1 points to the URL bar. Step 2 points to the 'Add to Firefox' button. Step 3 points to the video player interface in Internet Explorer, showing the URL and the Download Helper icon. Step 4 points to the Download Helper icon in the video player's toolbar.

You only have to install the Download Helper the first time. After that, every time you go to a page where a video can be downloaded, you can use the little arrow next to the Download Helper icon and save it to your desktop
